

## Position

- Create a page containing a paragraph followed by three images
- Add more paragraphs after the images in order to make the page scrollable
- **Relative**
  - The first image should be positioned relatively
  - Move the image 50px from the top and 100px from the left
  - If image is over the text of the paragraph, add margin to the bottom of the image
- **Absolute**
  - The second image should be positioned absolutely and it should appear 10px from the right and 15px from the top of the edge of the browser window
  - Position the third image at the bottom of the page
- **Fixed**
  - Add a link at the bottom of the page
  - The link should bring you back to the top of the page
  - Position the link in the bottom right corner of the window
  - The link's position should be fixed so that is always visible

## Position

Lorem ipsum dolor, sit amet consectetur adipisicing elit. A maxime quisquam eum voluptate adipisci eius. Corporis quas, ipsa placeat eaque nemo natus amet sed, a veritatis, ab nobis excepturi at?

## Advanced positioning (Homework)

## Z-Index

- **Creating divs**
  - Create a page with three divs
  - Elements on the page should be 200px wide and 200px high
  - Each div should be of different color
  - Divs should be stacked one on top of the other
- **Arranging divs**
  - Copy code from the first section and create a new one
  - Position divs as presented in the example
  - Use relative position for positioning
- **Rearranging divs and stacking order**
  - Create one more section using html code from the first section
  - Arrange divs as shown in the example
  - This time use absolute positioning
- **Change stacking order using z-index**

Z-index

## Float

- **Create navigation**
  - Navigation should be implemented as unordered list
  - Transform navigation using CSS to be in one line
  - Navigation is floated to the right
  - Width of navigation container is 960px

- **Recreate the following layout** (on the next page)
